

SUPERSTORE SALES PERFORMANCE DASHBOARD ANALYSIS

PREPARED BY: WINNER CHIOMA UNUAGBON

TOOL USED: POWERBI

DATASET: SUPERSTORE SALES DATASET

WEEK 4 TASK

DATE: MAY, 2026.

DATASET OVERVIEW

DATASET: SUPERSTORE SALES DATASET

CONTENTS: The superstore dataset contains transactional sales data from a retail business, and it is designed to support business performance analysis. The dataset includes information on customer orders, shipping details, customer segments, product categories , sales revenue, and profitability across regions.

Key fields in the dataset include;

1. Order and shipping information (Order ID, Order date, Ship date, Ship mode)
2. Customer details (Customer ID, Customer name, Segment)
3. Geographic information (Country, City, State, Postal code, Region)
4. Product information (Product ID, Category, Sub Category, Product name)
5. Performance metrics (Sales)

BUSINESS PROBLEM

The company generates sales across multiple regions, customer segments and product categories. However, the growing volume of transactional data makes it difficult for management to quickly assess overall business performance and identify key growth opportunities.

The organization needs answers to critical business questions such as:

1. Which region generates the highest sales revenue
2. Which product categories and sub- categories are most popular amongst customers
3. How have sales trend changed over time
4. Which customers contribute the most to overall sales
5. Which products drive the highest sales volume

To address these challenges, an interactive Power BI dashboard was developed to transform raw sales data into meaningful insights. The dashboard enables stakeholders to monitor key performance indicators, track sales trend, evaluate product performance, and make informed business decisions based on data.

KEY PERFORMANCE INDICATORS (KPIs)

The dashboard was designed around five (5) key performance indicators to provide a comprehensive view of sales performance, customer activity, and operational efficiency.

1. **TOTAL SALES;** This represent the total revenue generated from all completed orders within the dataset. This KPI measures the overall business performance and revenue growth
2. **TOTAL ORDERS;** This shows the total number of orders placed by customers. It helps evaluate transaction volume and customer purchasing activity.
3. **TOTAL CUSTOMERS;** This represent the number of unique customers who made purchases. This metric provides insights into customer reach and market penetration
4. **AVERAGE ORDER VALUE (AOV);** It measures the average amount spent per order. It is calculated by dividing total sales by the total number of orders and helps assess customer spending behaviour
5. **AVERAGE SHIPPING DAYS;** It measures the average time taken between the order date and ship date. This KPI helps evaluate delivery efficiency and overall customer service performance.

SALES TREND OVER TIME

Sales performance fluctuates over time, with November 2018 recording the highest sales, indicating seasonal peak in demand

SALES BY REGION

The west region leads in sales with approximately 710.22K, making it the strongest performing region in the market.

TOP 10 CUSTOMERS BY SALES

Sean miller is the top customer, generating approximately 25.05K in total sales, showing strong individual contribution to revenue.

SALES BY SUB-CATEGORY

Sub_Category	Sum of Sales
PHONES	327,782.45
CHAIRS	322,822.73
STORAGE	219,343.39
TABLES	202,810.63
BINDERS	200,028.79
MACHINES	189,238.63
ACCESSORIES	164,186.70
COPIERS	146,248.09
BOOKCASES	113,813.20
APPLIANCES	104,618.40
FURNISHINGS	89,212.02
PAPER	76,828.30
SUPPLIES	46,420.31
ART	26,705.41
ENVELOPES	16,128.05
LABELS	12,347.73
FASTENERS	3,001.96

Phones recorded the highest sales across all years, making it the strongest performing sub-category.

DELIVERY PERFORMANCE BY SHIPPING
MODE

Standard class has the average shipping time at 5.01 days, while same day shipping is the fastest at about 1 hour (0.04 days), showing major differences in delivery speed.

RECOMMENDATIONS:

Based on the analysis, the following recommendations are proposed:

1. Focus marketing and sales efforts on high performing regions to maximize revenue growth and strengthen customer retention.
2. Increase inventory and promotional activities for top selling product sub categories to meet customer demand and drive higher sales
3. Monitor underperforming products and regions to identify potential causes of low sales and implement targeted improvement strategies.
4. Improve shipping efficiency by adopting the most effective shipping modes and reducing delivery times where possible.
5. Develop customer loyalty programs and personalized marketing campaigns to encourage repeat purchase and increase average order value
6. Continue monitoring sales trend through interactive dashboards to support timely and data driven business decisions

CHALLENGES FACED:

Understanding the dataset structure and relationships between different fields such as customers, products, orders, and regions.

CONCLUSION:

The dashboard enables stakeholders to monitor critical KPIs , explore trends , and make informed decisions based on data. Overall, the project demonstrates the importance of data visualizations and business intelligence in supporting strategic planning and improving organizational performance.
